

Request for Proposal: Development of a Flexible and Scalable QSS Platform for Dental Practices

Project Overview

We are seeking a development partner to create a highly flexible, scalable, and user-friendly Quality Management System (QSS) platform tailored for dental practices. The platform should streamline process management, improve task tracking, facilitate communication, and ensure compliance with industry regulations. It must be cloud-based, modular, and customizable to meet the unique requirements of various dental practices.

Core Functionalities

1. User Management

- Role-based access control:
 - Superadmin, Admin, Dentist, Dental Assistant, Trainee (Learner), and Custom Roles.
- Flexibility to define new roles with tailored permissions.

2. Process and Task Management

- Create and categorize processes (e.g., hygiene, maintenance).
- Assign tasks with:
 - Name, description, frequency, deadlines, and assignees.
 - Attachments for learning materials or instructional documents.
- Dependencies and triggers to link tasks logically.
- Status tracking (open, in progress, completed, overdue).

3. Room and Device Management

- Room profiles with assigned tasks and inventory.
- Device profiles with:
 - Maintenance schedules, serial numbers, and QR code integration.
- Device-specific task assignment and history tracking.

4. Material and Medication Inventory

- Material management:
 - Track stock levels, expiration dates, and supplier links.
- Medication management:
 - Log quantities, usage, and expiration alerts.
- Automatic updates for usage tied to task completion.

5. Communication and Collaboration

- Real-time chat for individuals and teams.
- Task-specific comments with mention functionality.
- Notifications for new messages, comments, or updates.

6. Learning and Knowledge Base

- Upload learning materials (videos, documents, interactive tutorials).
- Monitor learning progress for each user.
- Central repository for protocols and manuals.

7. Reports and Analytics

- Task completion statistics.
- Employee performance metrics.
- Inventory and usage reports.
- Customizable dashboards with exportable data.

8. Superadmin and Admin Dashboard

- Overall QSS Score based on task completion.
- Alerts for overdue or upcoming deadlines.
- Comparative insights across rooms, devices, or employees.

Technical Requirements

1. Cloud-Based Architecture

- Scalability for small and multi-location practices.
- Data security with compliance to GDPR standards.

2. Customization

- Modular design enabling activation/deactivation of specific features.
- Custom fields for processes, tasks, materials, and medications.

3. Third-Party Integration

- APIs for supplier systems, practice management software, and accounting tools.

4. Mobile-Friendly

- Responsive design for seamless use on desktops, tablets, and smartphones.

Expected Deliverables

1. Fully functional platform with all core modules.

2. Role-based dashboards tailored to user needs.

3. Detailed documentation for future scalability and maintenance.

4. Ongoing support and updates for a specified period post-deployment.

Timeline and Budget

1. Please include an estimated timeline for the development, testing, and deployment.

2. Provide a breakdown of costs (milestones), including initial development and potential long-term maintenance fees.

Submission Requirements

When submitting your proposal, please include:

1. A detailed project plan and timeline.
2. Relevant experience in developing similar platforms.
3. Examples of past projects or case studies.
4. Proposed technologies and development stack.
